

The government and civil society are already doing enough to deal with the behavioural issues such as drink-driving and ensuring that driv-

a dual carriage way? This is just a 130km road. Government, as a pilot intervention, can make this road a dual carriage way even within one financial year while continuing to

carriage rather than relying on piecemeal interventions.

## Let's join hands in the fight against cancer

In the recent past, cases involving cancer and leukemia patients have increased and in many instances, the patients need much money for a decent treatment. Many have resorted to fundraising through car washing, charity, etc to get money needed for a decent treatment. Yet many others have lost their lives because they cannot raise money for treatment.

We should appreciate the fact that

there is no body who prefers to suffer from or being born with leukemia. They contract these diseases. This is absurd. These diseases no longer attack people due to old age. Therefore, I appeal to the President to institute a special programme to take care of these diseases.

It is said that tremendous needless pain and suffering can be eliminated by ensuring that health insurance is universally available. Therefore, I call upon

citizens to join hands and find a way forward to mitigate problem of cancer and leukemia. We can set up a particular fund aimed at financing this cause.

While we may not be suffering from these diseases, our children or relatives may contract them hence the need to take appropriate action now so as to unnecessary loss of lives.
