**SERERE.** The National Semi-Arid Resources Research Institute (NaSARRI) in Serere, eastern Uganda, is going to be a beehive of activity this morning as the eighth Monitor Farm Clinic addresses the existing farming challenges at length.

The free of charge exhibition, thanks to sponsors: Heifer International, Ministry of Agriculture and Animal Industry and Fisheries, NTV and NaSARRI, is basically going to address the requirements of getting high quality farm produce in semi-arid environment.

According to Ms Elizabeth Namaganda, the Monitor Publications brand manager, the participants have a glorious opportunity to learn smart climate farming techniques and also create a network for farmers and share experiences.

"After the hands-on training, we shall also give all the participants free farming notes and a chance to ask the NaSARRI experts questions" Namaganda said.

The farmers are going to be enlightened on how to deal with semi-arid enterprises such as cotton, citrus, sorghum, peas, sunflower, ground nuts and cassava, beef and dairy with hopes of generating more money and satisfying the ready market.

The participants stand a chance of attending at least four of the nine enterprises while there will be exhibitions from more than 10 agribusiness companies plus a farm management lecture to all in regards to handling the business side of farming enterprises.

Ms Namaganda expects this
